

Backup

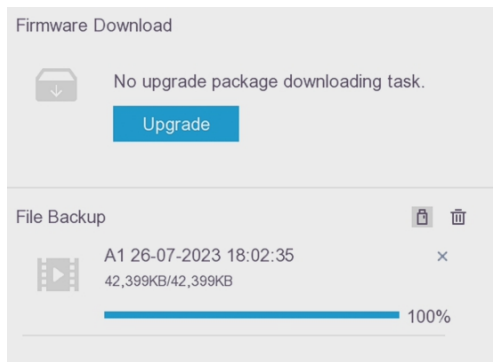

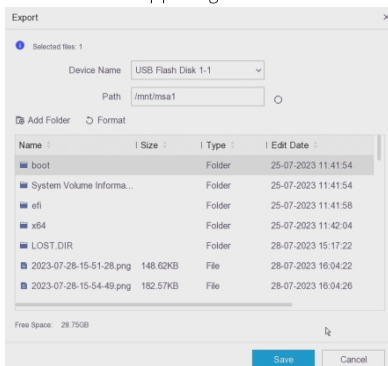

1.NVR local backup

Before starting the backup, please insert the backup device (such as a USB flash drive, mobile hard disk and other storage devices) into the device usb port.You can go to Menu>Search enter into the interface of Export and select the cameras to search.

- 1.Set search condition and click Search button to enter the search result interface.
2. The matched video files are displayed in the list.Select video files and click export.

3. Select Video and Log and click OK to export files to backup device.The progress of the backup can be viewed in the upper right corner.

2. Network backup

Log in to the NVR IP address through the browser to enter the NVRweb page, click playback, search for the video and click download, as shown in the figure:

Note: When logging in to the browser for the first time, you need to click on the plug-in download in the upper right corner and click it to preview and play back the video.
